### 第3問 次の文を読んで、設問（問34～39）に答えなさい。

Haven't we gone too far? It is time for us to call a (a) ban on all experimentation with human \*genes if we want to protect the human race. If scientists continue to \*tinker with genes in their laboratories, they might create human monsters! Perhaps their experiments will one day lead to cures for the hereditary diseases passed on through the generations. They may also help improve food production and insect control. However, no one knows today what negative results these experiments might bring to our lives in the future. By then it might be too late, and the effects these experiments will have had on people could be \*irreversible.

A resolution must be passed by the government to watch over and ( b ) all future experiments. Otherwise, the situation could (c) get out of control. Scientists have already \*manipulated genes, in their laboratories, which haven't yet been released into the environment. This is because they are not sure what will happen once the genes are released. They don't know what long-term effects these changed genes could have on our world.

Yet some people continue to believe there is only a remote possibility that genetic engineering could have a negative effect on the environment. They tend to see only the good that this experimentation might bring to the world. However, many of us see this experimentation as dangerous. Our fears are not \*unfounded. We need only to look at history. Man has consistently been surprised by the results of his experimentation.

So, until we can \*refine, to perfection, the techniques (d) used in genetic engineering, we should not be playing around with genes. The government should begin to \*curtail all genetic engineering until scientists are a hundred percent sure of what the long-term results of their experiments will be on us, the human race.

\*genes 遺伝子      \*tinker いじくり回す      \*irreversible 元に戻せない

\*manipulate (問題を) うまく処理する      \*unfounded 根拠のない

\*refine (技術などを) 磨く      \*curtail 抑える

What effect will genetic engineering have on our lives?

- ① It will give only a negative effect. We have to stop the experiments immediately.
- ② It might be useful in medicine and agriculture, but could be very dangerous to human race.
- ③ It will do us good. We don't have to worry about the bad effects.
- ④ It will have nothing to do with our lives. We may leave it as it used to be.

解答番号38

問39 本文の内容と一致するものを次の①～⑤から2つ選びなさい。

- ① Scientists continue to play around with genes to create human monsters.
- ② The experiments with genes may improve food production and insect control.
- ③ Scientists have already known the long-term effects the changed genes could have on our world.
- ④ Some people tend to see only the bad that genetic engineering might bring to the world.
- ⑤ The government should control all genetic engineering until scientists are quite sure of the long-term results of their experiments.
